

Pure PDF Viewer

A sample document, generated for this repository.
It carries no third-party content: every page here exists
to exercise the viewer itself.

What to try

Select text with the cursor, then pick Highlight,
Underline or Strikeout from the Annotate row.
Use the search field to jump between matches.
Press T to place a text box, then drag it or
pull its right edge to rewrap the words inside.

Annotation tools

Highlight, underline, strikeout

These three act on a text selection. Select a phrase on this page and apply one; the mark is stored against the page in normalized coordinates, so it stays put when the document is zoomed.

Pen

The pen draws freehand strokes onto an overlay above the page. Strokes keep their shape across zoom levels.

Text

A text box is placed where you click. It can be moved, resized, recolored and resized in type.

Search and navigation

The word compiler appears on this page several times.
A compiler translates source code into another form.
A just-in-time compiler does that work while the
program is already running.

Paging

Use the arrows in the toolbar to step between pages,
or scroll continuously. The page indicator on the
right reports the current position.

Zoom

Zoom with the toolbar controls or a trackpad pinch.
Annotations are re-laid out to match.

About this file

This document is generated by a script in the repository, not copied from anywhere. It is placed in the public domain along with the rest of the project.

Regenerating

Run the generator to rebuild this file. Edit the PAGES table in that script to change the contents.
